Foreward

It gives me great honor to present Toronto Panchang for the first time prepared by Pundit Mahesh Shastri Ji. We have seen to many misconceptions surrounding Hindu Religious dates that confuses the young and elderly. We have thoroughly gone through and Maha Rudra Dev mandir is pleased to be in this alliance.

Maha Rudra Dev Mandir (MRDM) was created to provide a place of worship for our Hindu community. This was a dream of many Hindus in the Toronto area, especially the youth community. Our religious practices were slowing dying because the youth community found it very difficult to read and interpret our religious books that were written in Sanskrit. There were not many Hindu priests who could expound the teachings of our religion in a manner in which the youth community could understand. The members of Maha Rudra Dev Mandir saw the need to reach out to our youth community and provide support so as to help them to understand and accept the teachings of our great religion. We approached a young and very enterprising Hindu priest, Pundit Ravi Sharma, to assist us in this mission. Pundit Sharma graciously agreed to volunteer his service and help us in this mission his our Spritual leader. Since our opening on August 15, 2014, the Mandir has been filled to capacity. The congregation is made up of 70% youths and 30% adults and elders. We commenced religious observances on August 15, 2014 with the installation of our Hindu deities.

Objectives.

To advance the spiritual teachings of Hinduism by preaching and providing religious instructions/classes to children, youths, adults and seniors to promote the spiritual welfare of the community by offering free yoga and meditation classes to youths and adults to work together to provide ways by which the community's spiritual, social and cultural needs can be met to encourage youth participation in all our religious observances and cultural events Networking and forming alliances with other charitable organizations and community partners in the advancement of community service as community partners

Some of our major events are Maha Shivratri, Holi, Hanuman Jayanti, Nav Raatri, Ram Navmi, Krishna Janam Ashthami and Diwali These events, through youth participation will be celebrated with Grand Splendor!

match with earth's speed and hence we have to add a leap year at some intervals, even when you validate from the distant star as a reference is 20 minutes longer than tropical year because of precession.

As per old Indian Astronomical treatises the time measurement was not done in hours and minutes but in terms of Ghatika (Nadi) and Pal (Vinadi). Where the length of the day was still 24 hours hence 60 Ghatis would map to 24 hours a day. The reference point when day (Ahoratram) starts was from the Sunrise to another Sunrise. Whereas per Panchangam helps the younger generation to appreciate the deep knowledge and current Gregorian calendar the day starts at 0:0 hours. In the ancient Rome timekeeping midnight was half between the sunset and next the Sunrise. Time keeping machines have also changed from Sundials, Hourglass to the clock.

Now a day some people celebrate birthdays, anniversaries as per Gregorian calendar but before people used to celebrate birthdate as per Indian Date (Tithi). Hindu Festivals are always celebrated as per Hindu calendar (aka Panchangams). The rules for celebrating festivals are unique to each festivals. Unlike Gregorian calendar, Hindu Panchangams depends on various factors like a) Distance between the Sun and the moon (Each 12 time (Muhurtha) comes into picture. Younger generations is also not aware about proper degree distance is called Tithi, the sun is calculated by calculating position of the earth around sun and adding 180 degrees), Local sunrise, sunset, moonrise, moonset and sometimes positions of moon around the earth in specific divisions called Nakshatra (The Moon's orbit around the Earth is divided into 27 equal parts making each part 800 minutes or 13 degrees and 20 minutes). These information is calculated by Panchangams and information appear inside every local Panchangams in every language.

Unfortunately, many of our Indian literature is still in language that they are written. This is true even for the Indian Almanac, the Panchangams which we use in everyday life. languages which have terms explained in local languages. Moreover the new generation siddhanta even today. are not well versed in the local languages, some of them are but not all.

Time is infinite and immeasurable and relative. For example, the concept of time doesn't Due to the lack of properly printed Panchangams in English, we as well as our younger exist in outer space. On earth we have various systems to measure time from time to time generation have started to forget the wealth and importance of panchangam. We need to in the past. Even current Gregorian calendar have been changed in the past. It doesn't train our younger generation to learn about your rich heritage. Apart from using the panchangam for determining the auspicious time to start an event, it gives them an after that it really doesn't match with earth's speed around the Sun. The same system understanding of astronomy, how the planets move, retrogression of planets, the concept of the Lagna – Ascendant (The rising sign on the eastern horizon on the ecliptic), apparent movement of the Sun reaches its highest or lowest excursion relative to the celestial equator on the celestial sphere (Uttarayana and Dakshinayana -- Solstice), the combustion of planets (Astha), and how the seasons change because of the earth's tilt (Solstice and Equinox).

> science that is embedded in our ancient culture and heritage and how our daily life was totally based on astronomy, which the younger generation is not aware of. This panchangam publication in English is not about the language preference, but an effort to make the panchangam more understandable and hence more reachable to our younger generation and general public.

> Everyone wants to live happy life. Happiness is a relative state of mind as a result of various baselines established by us in our mind. This is where selection of auspicious selection of auspicious time. This publication will help to understand the importance of auspicious time (Muhurtha), to know when to observe which festival and understand the scientific aspect of Hindu panchangam.

First my grandfather Pundit Maganlal Devshankar Shastri, then Pundit Tulajashankar Dhirajram Shastri, Pundit Amritlal Trikamji Acharya, Pundit Chhelshankar, Pundit Narmadashankar Shukla have merged into infinite - The Now-a-days English has become the primary medium of communication is modern India. great consciousness. Rigveda says 'ekam satya vipra bahudha vadanti'. The truth is one and it fills all guarters – above, below, left, right and around – The great consciousness that animates our biological bodies. Although they have merged with infinite, they are still There are not many Panchangams that are printed in English. There are some available with me as my biological body is animated by the same great consciousness and guiding online, that too which are incomplete in many aspects, even if they give information they me from time to time. My uncle Pundit Narayandas Revashankar Upadhyay continues to don't have a siddhanti backing up their data or they don't have every information. Apart guide me even today. There are many gurus I met on my way I'm indebted to all of them. from that, most over the counter printed Panchangams are available in vernacular I am indebted to my parents their blessings helped me learn complex panchanga

How to read this panchang

- This panchangam is calculated using Mumbai, India, Maharastra's Longitude and Latitude, with daylight saving times adjusted.
- All planetary positions are Geocentric using Drigganitha using high precise NASA's JPL data.
- Top Row indicated, Chandra Masa name (Amavasyant Name), English month and year and Tamil month names.
- Panchangam columns appear in following order.
 - English Date.
 - Vaar Day Sunday, Monday etc
 - o Sunrise.
 - Sunset.
 - Moon rise.
 - Tithi and its endtime. Here tithi are numbered. 1 Prathama, 2 Dvitiya, 15 –
 Purnima, 30 Amavasya
 - Nakshatra and its end time.
 - Yoga and its end time.
 - Karana name and its end times.
 - When one tithi, nakshatra, yoga, or karana ends next starts right away. When the time is greater than 24 it means it ends past midnight in such case subtract 24 hours from the time. This is because a Hindu day doesn't end at the midnight. It is always from one sunrise to another.
 - Description. Includes Tithi Nirnayam, Festival information, etc along with Rahukala, Yamaganda, Durmuhurtha and Varjyam timings are part of the description. These are inauspicious timings and should be avoided during the day. But remember final verdict is always Lagna shuddhi
- Acronyms used in the Description column
 - Sun: Sun's time to enter rashi
 - Moon: Moon's time to enter rashi
 - TY: Amritadi yogas used in a tamil panchangam
 - RK: Rahu Kalam
 - YM: Yamagandam
 - DM: Durmuhurtham
 - V: Varjyam
- RK, YM, DM, and V: are inauspicious and needs to be avoided in good muhurtha. But
 if you have a lagna shuddhi then it will override this timings. Please consult your
 astrologer for more clarifications or better muhurtha.

Kshya/Vriddhi Tithi:

Normallly during the day there will be two tithis as tithis don't end everyday at midnight around 0:0 hours. Tithis are simply a 12 degree distance between the Sun and the Moon. Hence they can end at any time during the day. This means every day there will be two thithis in a normal case. A length of tithi can be anything from 19 hours to 26 hours. Which means each day there can be one entire tithi running the entire day (Vriddhi Tithi). When a tithi is short say 19 hours then most likely there will be 3 tithis in the entire day (Kshya tithi). These both needs to be avoided for muhurtha.

About Panchanga Panchanga

Panch means Five, Anga means Elements. Five Elements makes panchanga. They are Vaar, Tithi, Nakshatra, Yoga and Karana. Hindu Panchangam is a lunisolar calendar.

Vaars

There are 7 vaars or Day. Unlike English Date they begin with the Sunrise and Ends at the next Sunrise. They are Sunday, Monday, Tusday, Wednesday, Thursday, Friday and Saturday. Out of these Monday, Wednesday, Thursday and Fridays are considered auspicious for any occasion. Usually Sunday and Tuesday are not good for Graha Pravesha but due to weekend people prefer Sundays a lot.

Chandramana Months

There are 12 months in chandramana starting from Chaitra, Vaishakha, Jyestha, Ashadha, Shravana, Bhadrapada, Ashwayuja (Ashwin), Karthika, Margasira, Pushya (Paush), Magh, Phalguna. Each month have two halves (paksha) Shukla (Waxing moon) and Krishna (Wanning moon). There are two schools on how month start and end. North Indian School: Months start with Krishna Paksha and ends with Purnima. This school is knows as Purnimant Panchangam. South Indian School (Gujarat, Maharastra, Andra Pradesh, and Karnataka): Months begin with Shukla Paksha and ends with Krishna Paksha Amavasya. This school is known as Amavasyant Paksha.

Solar Months

States like Punjab, Orrisa, Tamilnadu, Kerala, Bengal, Assam uses solar months. These starts from the day when the nirayana sun enters a new rashi. There are 12 rashis and hence there are 12 months. Each of them have unique names and different rules on how to know when month start depending on what time of the day sun enters new rashi. The names of months depends from place to place – Punjab, Orissa, Bengal, Assam, Kerala, & Tamilnadu.

Tithi

Tithi means a date. Like English month Hindu Months also have a date but a month is divided into two parts. Waxing moon (Shukla Paksha) and Wanning Moon (Krishna Paksha). Hence there are 15 dates in a Shukla Paksha and 15 dates in a Krishna Paksha. They both begin with Prathama or Pratipada and continue till Chaturdashi (14th tithi). After that a Shukla paksha date (15) will end with a Poornima and a Krishna Paksha Date (30) ends with Amavasya. Usually Krishna Paksha 13th – Trayodashi, 14th – Chaturdashi and 30th – Amavasya are avoided for any auspicious occasion. Please note Diwali festival comes on Amavasya. Tithis are divided into various groups commonly known as *nandadi* group. The Rikta tithis group (4th – Chaturthi, 9th Navami and 14th Chaturdashi) should be also avoided for any auspicious occasion. Tithis are 1 – Prathama, 2—Diwitya, 3 – Tritiya, 4 – Chaturthi, 5 – Panchami, 6 – Shasthi, 7 – Saptami, 8 – Asthami, 9 – Navami, 10 – Dashami, 11 – Ekadashi, 12 – Dvaadashi, 13 – Trayodashi, 14 – Chaturdashi – 15 – Poornima and 30 – Amavasya.

Nakshatra

There are 27 Nakshatras or Constellation. When you look from the earth it appears that the Sun is moving around the Earth, that apparent path of the Sun in Astronomy is called the Ecliptic. The entire Ecliptic is divided into 27 equal parts. Each part becomes of 800 kalas or 13 degrees and 20 kalas and is called as a nakshatra. Every planet in the heavens appears to be moving aound earth on the ecliptic with in 10 degree band on either side. Hence each planet have a nakshatra. When someone asks what is your star – nakshatra? They want to know at the time of your birth where moon was positioned on the ecliptic in terms of nakshatra. When you hear today's nakshatra is svati. It means today moon is transiting over svati region on the ecliptic. For auspicious muhurtha we need to avoid the day when the moon is transiting through nakshatras occupied by other malefic Graha (heavenly bodies – or vagely planets) such as Sun, Mars, Saturn, Rahu and Ketu. In most part of India when the baby is born she is named based on the nakshatra occupied by moon. Each nakshatra duration (The time moon stays in a nakshatra) is divided into 4

parts. Each part is called the Padam and the baby's birth time is determined which padam or charana it falls. Each padam or charana of nakshatra has a specific letter assigned to it. The baby is named from that letter. The table is given in this panchang.

Nakshatra names are:

1. Ashwini, 2. Bharani, 3. Krittika, 4. Rohini, 5. Mrigashira, 6. Ardra, 7. Punarvasu, 8. Pushya, 9. Ashlesha, 10. Magha, 11. Purva phalguni, 12. Uttara Phaguni, 13. Hasta, 14. Chitra, 15. Swati, 16. Vishakha, 17. Anuradha, 18. Jyeshtha, 19. Moola, 20. Purvaashadha, 21. Uttarashadha, 22. Sravana, 23. Dhanistha, 24. Shatabhisha, 25. Purva bhadrapada, 26. Uttara bhadrapada, 27. Revati.

Yoga

Yoga in Sanskrit means addition. The degrees of the Sun and the Moon around the ecliptic are added and then divided by 360, and the reminder is yoga. They represent auspicious and inauspicious combination. Please avoid Vyatipata, Vaidriti, Parigha, Vishkumbha, Vajra, Shoola, Atiganda, Vyaghata for auspicious muhurtha.

The names of Yoga are: Vishkambha, Preethi, Aayushman, Soubhagya, Shobhana, Athiganda, Sukarman, Dhruthi, Shoola, Ganda, Vruddhi, Dhruva, Vyaghatha, Harshana, Vajra, Siddhi, Vyathipatha, Variyan, Parigha, Shiva, Siddha, Sadhya, Shubha, Shukla, Brahma, Aindra, Vaidhruthi

Karana

Karana means half tithi. Each Tithi is divided into two parts. Each part is called karana. There are 4 Fixed Karanas and 7 Movable (Chara) Karanas. Fixed Karanas are: Shakuni, Chatuspad, Naga, Kimstughna. Names of 7 Movable Karanas are: Bava, Balava, Kaulava, Taitila, Gara, Vanija, and Visthi (Also known as Bhadra). Visthi Karana has to be avoided in all muhurtha calculation.

Rashi

When the Ecliptic is divided into 12 equal parts then each 30 degree part is called the Rashi or Zodiac. There names of 12 rashis are Mesha, Vrishabha, Mithuna, Karka, Simha, Kanya, Tula, Vrischika, Dhanush, Makara, Kumbha and Mina. In certain parts of India like Gujarat and North India the rashi in which the Moon appears to be transiting is also used for naming the baby along with the nakshatra.

Nirayana and Sayana

Nirayana means without any ayana. The entire solar system is orbiting around the center of the Milkyway Galaxy. There are some fixed distant stars close to the center of the Milkyway Galaxy where we can see the Earth's precession. This precession causes equinox (A point where celestial equator and ecliptic intersect) slide every year. For astronomical calculations Sayana calculations are used (without precession of equinoxes). For Hindu astrology purpose that precission of the equinox is subtracted (rate calculated from some epoch), giving us Nirayana rashis, longitudes of heavenly bodies. However for certain things we do need Sayana for visible 'phenomena' like Eclipse, Ayana, Moudhyami (Heliacle Rising and setting), Seasons (Rutus) and Retrogression.

Ayana

The earth is not straight, its axis is tilted to 23.45 degrees. If you extend the Earth's equator to heavens it is called as a celestial equator. The ecliptic is inclined at 23.45 degrees to the celestial equator. The apparent path of the sun is hence inclined at 23.45 degrees. Which means when we view the Sun from the Earth it 'appears' the Sun is moving up and down in latitude. Hence we have seaons. When the Sun faces the northern part of the celestial equator the countries north of the equaltor gets summer and when

the Sun is below the celestial equator the countries above the equator gets winter. This appearant path of the sun moving up and down on the equator upto 23.45 degrees north and south is called Ayana. When the Sun appears to be moving up is called Uttarayana and when the Sun appears to be moving down is called dakshinayana. Ayana is visible Phenomena and hence Nirayana longitudes cannot be used. It's unfortunate that still many people use nirayana longitude to calculate uttarayana and dakshinayana. Likewise same for Seasons (Rutus). Seasons — Rutus are visible phenomena. The summer will always come in summer like wise winter (until another polar shifts happen).

Strong Lagna shuddhi gets 1000 points in muhurtha. Most people ignore lagna shuddhi. But it is also important to find the good date before we dive into lagna shuddhi. To find the right date you'll need to avoid:

- Avoid a Kshya or vriddhi Tithi
- Avoid Kshya or Vriddhi Nakshatra

- Avoid Amavasyant Bhadrapada Krishna Paksha Shraddha Paksha
- Avoid Dhanurmasa
- Avoid Kshya Masa or Adhika Masa
- Avoid Rikta Tithis (4-9-14) and Amavasya.
- Avoid Days of Eclipse, Note down nakshatra of eclipse avoid that nakshatra for 3 months if total eclipse for partial eclipse avoid for 1.5 months.
- Avoid Kranti Samya Dosha (Maha paat). When the declinations of the Sun and the Moon are same its called Mahapaat.
- Avoid Ashadha masa. Some people just avoid Ashadha Krishna paksha.
- Check Tarabalam in Krishna paksha (From Krishna 5th to Shukla 4th) Otherwise check Chandra bala.

Basic Muhurtha Tips

Panchaka Rahita Vidhi for Muhurtha

Important ceremonies such as marriage, nuptials, entry into new houses, etc., this should be carefully looked into. There are several methods by which panchaka are determined. The most common method is to add following and divide by the number 9.

The number of the lunar day (from the 1st of the month). For Krishna paksha add 15 to the tithi. For example, Krishna paksha prathama to be 16, and amavaysa to be 30. You can find the tithi in our panchangam. The time after tithi is the time when the tithi ends.

- The number of the weekday, Sunday 1, Monday 2, Tuesday 3. etc.). You can find the day in our panchangam. It's the top most header of the column. For the night time Muhurtha please don't change the day. Indian day is from one sunrise to another sunrise.
- The number of the constellation (from Aswini 1, Bharani 2, etc..). You can find the Nakshatra in our panchangam. The time after the Nakshatra is the time when the Nakshatra ends.
- The number of the Lagna (from Aries/Mesha 1, Taurus/Vrishabha 2, etc...). You can find the lagna from our lagna table for your city. This can be found by logging into www.mypanchang.com or www.mypanchang.com/astrology and click on vedic kundli, and enter details.
- Now add these together and divide the total by 9. If the remainder is 1,2,4,6, or 8 then it indicate bad results as follows:
 - 1 (mritvu panchakam), it indicates danger.
 - 2 (Agni panchakam), risk from fire.
 - 4 (raja panchakam), bad results.
 - 6 (chora panchakam), evil happenings.
 - > 8 (roga panchakam), disease.

If the remainder is 3, 5, 7 or zero then it is good. **Example**: Let's consider Tithi: Krishna Paksha Dwitiya (15+2=17), Saturday (7), Moola/Mula Nakshatra (19), and Kumbha (11) lagna. Let's add these together. This gives us total of 54. Now divide this total of 54 by 9 giving us the reminder of zero hence it is good. For Gruha Pravesham 4th and 8th house should be empty

For Wedding:

- ✓ All days (Vaara) are good for wedding.

Calculating Chandra Balam using above table

Count from the Birth rashi (The date and time, and place where you are born, at that time the rashi of your moon – Chandra is called birth rashi and nakshatra of Chandra is called Janma Nakshatra. To find out your rashi and nakshatra visit mypanchang.com/astrology and then click on the Vedic kundli, fillout your details and click submit) to the current's time Chandra (mentioned in this panchanga), look them into this table and get the number. When the numbers are 1,3,6,7,10 and 11 then its good otherwise its bad. In Shukla paksha 2, 5, and 9th positions are good and in the Krishna Paksha 4,8, and 12 positions are good. When Chandra bala is bad the parihar is Chandra graha pooja, mantra japa, and donation of rise. Shukla paksha give importance to Chandra balam and in the Krishna Paksha give importance to Tara balam.

Guru Balam

For Vivaha (Marriage) and Upanayana (Janeu) muhurtha, Guru balam is given importance. In marriages Kanya's guru balam needs to be seen. Count from her Janma rashi (Rashi of the birth moon) to the date and time when the ceremony is to be done that time's rashi of the guru. If the count is 2,6,7,9 or 11 then it is auspicious. If the count is 1,3,6, or 10 then Guru puja, shanti, guru mantra japa needs to be done before marriage. If the count is 4,8, and 12 then its bad. One needs to peform 3 times puja, shanti or mantra japa for such positions.

Notes: Numbers under each months are tithis. 1 indicates Prathama and 12 indicates dvadashi. For Trayodashi (13), Chaturdashi (14) and Purnima (15) please use 3, 4th and 5th respectively. Travels are not advised on Amavasya (30) hence not mentioned here. Next Columns are Prahara. Each day and nights are divided into 4 equal parts. The Day is treated as from one sunrise to sunset. Hence for Day travel Subtract Sunset from Sunrise time, giving you dinamana. Divide this dinamana by 4 giving you duration of each Prahara. Calculate this prahara from Sunrise by adding the duration of prahara we just calculated. For night time, calculate ratrimana by subtracting sunset from the next day sunrise and then divide by 4 giving duration of each prahara during the night time. Add this to sunset and go on calculating prahara for night. Then comes direction in which you are travelling.

Night time Prahara Calculation Example:

- For example next day sunrise is 6:24 (decimal 30.4) and previous day sunset is 17:50 (Decimal 17.8333333333).
- Convert time into Decimals for easy calculations. To get time in decimal divide minutes by 60 and add this to hours. For next day sunrise add 24 hours to the hours.
- Subtract nextday surise from sunset. This means ratrimana is 12.56666666666667.
- Divide this by 4, giving us duration of each prahara as 3.14166666666667 which means 3 hours 8 minutes and 50 seconds for each prahara.
- Add this to the previous day sunset. Now we want to travel at 9 PM. This means our prahara is going to be 2nd Prahara.
- For example if you would be travelling on Pushya Ekadashi (11) in the 2nd prahara to India (which is East from Seattle), which brings Financial Gain (2nd Prahara Result) and Death (East), which means both results can be experienced. Death means near death experience here. Need to be careful about accidents, swimming etc. Where there is a '-' means zero result.

The day time prahara calculation is very simple. This table doesn't require use of other doshas like Chandra dosha, Disha shola, Yogini, Ghata Vaara etc. This is told by Swami Gorakhanath to Swami Matsyendranath.

EXPLANATION

Biggest misconception is "Indian Hindu festivals observance date in the Indian calendar / panchang is applicable for all location in world". We use our favorite Panchangam from India to find an observance date for an Indian festival. In reality observance dates from Indian Panchangam is valid only in India and is not transferrable to other locations. If the earth is flat we can use Indian calendar everywhere in the world. Due to the time zones/differences there is another misconception that as USA/Canada and Europe is behind in time then Festival will come a day later in USA/Canada and Europe. This is incorrect. If Seattle/Vancouver/California is 13 hours 30 minutes behind Indian Standard Time and say an event is happening in India at 8 AM then will it be the previous day in USA/Canada. You'll subtract 13 hours 30 minutes from 8 AM. Which gives 6 hours 30 PM the previous day in USA/Canada Pacific Time Zone.

Tithis, Nakshatras, Yoga and Karana are such events, as they end at the same instance all over the world. After calculating tithi and nakshatra endtimes per local timezone, the rules used to determine festivals. The local factors like like Sunrise, Sunset, Moonrise, and Moonset are used along with Tithi to determine festivals. Hence, sometimes festivals may appear on the same day as India or a day before in the countries west of India. The countries east of India the festival may appear on the same date as India or a day later.

<u>Hindu day changes at the sunrise (not midnight)</u>, a Hindu day (Vaar) is from one sunrise to another. The Hindu date or tithi doesn't change at the midnight, and it is not always fixed 24 hours

Iong Each the the same of the

long it can be anything between 19 to 26 hours. Each 12 degrees distance between the Sun and the Moon is Tithi. It can change anytime during the day. If a tithi ends today at 11:02 PM it doesn't mean that next tithi will end tomorrow at the same time. It can end at 6 PM, 6:09 PM or 8:27 PM. Panchangam contains two types of calculations: Local coordinates like longitude and latitude: Sunrise, Sunset, Moonrise, Moonset depends on this set. The Geocentric astronomical positions

for the Sun and the Moon. The tithi, nakshatra, yoga and karana are based on this set of calculations. This astronomical phenomenon happens instantly at the same moment on the earth everywhere, and hence thithis, nakshatra will begin and end at the same time / instance all over the world and we must convert them to our standard time. Indian panchang makers convert this ending times to Indian time. Likewise, we need to covert it to our time zone for America/Canada or other country for that matter.

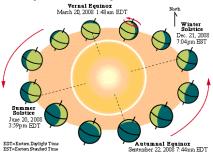

For example: October 17th 2008 the Ashwayuja (Ashwin) Krishna Paksha / Poornimant Kartik Krishna paksha tithi Tritiya ends at 4:39:21 PM Indian Standard Time, and chturthi starts. That means at 4:39 PM there is tritiya still prevailing in India. Now on October 17th 2008 in Seattle, WA at the 4:39 PM we won't have tritiya at that time. We already have chaturthi started because Planets keep on moving. 13 hours have passed and the position of sun and moon have changed. So what time Tritiya will end in Seattle? The time difference is 13 hours 30 minutes (with one our

day light saving time it gives the difference of 12 hours 30 minutes from IST). So, let's subtract 12 hours 30 minutes from the 4:39:21 PM. That gives us 04:09:21 AM on October 17th. So on October 17th after that time we'll have chaturthi tithi and before we have tritiya. The same way if tithi ends at 8:39 AM on Sept 12 in India it will end at 08:09 PM on Sept 11th in Seattle. The same way Western Australia is 8 hours ahead of GMT and hence the chaturthi will end there at 12:09 PM on Sept 12th. The arth keeps moving. It doesn't wait for tithi or festivals to arrive in your timezone. The sun doesn't rise instantly at the same time all over the world Hence we need to convert the panchanga times to local standard time. After knowing tithi ending times, it's a time to decide festival dates for each region.

How festivals are determined? The sankathara chaturthi the chaturthi tithi must be prevailing during the moonrise time. Sankathara Chaturthi/Karwa Chauth is celebrated when Chaturthi prevails during moon rise time Moonrise in New Delhi on a given date is at 7:36 PM and in West Bengal, Kolkatta is at 7:25 PM. Now tritiya ends at 07:32 PM IST. So Kolkatta will celebrate karwa chauth/sankathara chaturthi on the next day where as people in New Delhi will celebrate on the same day.

<u>Timings in this calendar are end timings of the Tithi and Nakshatra</u>. Times are AM/PM, when it ends past midnight, before next day sunrise "Next Day" and the end time mentioned. If it ends past next day Sunrise then only "Next Day" is mentioned.

<u>Uttarayana/Dakshinayana:</u> The season occur based on earth's position around the Sun. This is

due to Earth's tilt of 23.45 degrees. The Earth orbits around Sun with this tilt. When the tilt is facing the Sun, we get summer and when the tilt is away from the Sun we get winter. This tilt it creates a phenomenon like the Sun travels north and south of the equator. The Uttarayana (Winter Solstice) is the Sun appearing to move north. The Dakshinayana (Summer Solstice) is the Sun appearing to move towards South. This causes seasons, equinoxes and solstices. There is a common misconception that

Makara Samkranti is the Uttarayana. This is because at one point in time Sayana and Nirayana Zodiac were same. Every year equinoxes slides by 50 seconds due to precision of equinoxes, giving birth to Ayanamsha and causing Makara Samkranti to slide further. If you think Makara Samkranti is uttarayana then as it is sliding it will come in June after 9000 years. All Drigganitha Panchanga makers like mypanchang, Rastriya Panchang, Janmabhumi Panchang, will use the position of the tropical Sun to determine Uttarayana and Dakshinayana. Hence January 14th isn't Uttarayana. Actual Uttarayana occurs on December 21st/22nd of every year. The same for Rutu. Rutus are always observed based on Tropical position of Sun.
