## Foreword

Time is infinite and immeasurable and relative. For example, the concept of time doesn't exist in outer space. On earth we have various systems to measure time from time to time in the past. Even current Gregorian calendar have been changed in the past. It doesn't match with earth's speed and hence we have to add a leap year at some intervals, even after that it really doesn't match with earth's speed around the Sun. The same system when you validate from the distant star as a reference is 20 minutes longer than tropical year because of precession.

As per old Indian Astronomical treatises the time measurement was not done in hours and minutes but in terms of Ghatika (Nadi) and Pal (Vinadi). Where the length of the day was still 24 hours hence 60 Ghatis would map to 24 hours a day. The reference point when day (Ahoratram) starts was from the Sunrise to another Sunrise. Whereas per current Gregorian calendar the day starts at 0:0 hours. In the ancient Rome timekeeping midnight was half between the sunset and next the Sunrise. Time keeping machines have also changed from Sundials, Hourglass to the clock.

Now a day some people celebrate birthdays, anniversaries as per Gregorian calendar but before people used to celebrate birthdate as per Indian Date (Tithi). Hindu Festivals are always celebrated as per Hindu calendar (aka Panchangams). The rules for celebrating festivals are unique to each festivals. Unlike Gregorian calendar, Hindu Panchangams depends on various factors like a) Distance between the Sun and the moon (Each 12 degree distance is called Tithi, the sun is calculated by calculating position of the earth around sun and adding 180 degrees), Local sunrise, sunset, moonrise, moonset and sometimes positions of moon around the earth in specific divisions called Nakshatra (The Moon's orbit around the Earth is divided into 27 equal parts making each part 800 minutes or 13 degrees and 20 minutes). These information is calculated by Panchangams and information appear inside every local Panchangams in every language.

Now-a-days English has become the primary medium of communication in modern India. Unfortunately, many of our Indian literature is still in language that they are written. This is true even for the Indian Almanac, the Panchangams which we use in everyday life. There are not many Panchangams that are printed in English. There are some available online, that too which are incomplete in many aspects, even if they give information they don't have a siddhanti backing up their data or they don't have every information. Apart from that, most over the counter printed Panchangams are available in vernacular languages which have terms explained in local languages. Moreover the new generation are not well versed in the local languages, some of them are but not all.

Due to the lack of properly printed Panchangams in English, we as well as our younger generation have started to forget the wealth and importance of panchangam. We need to train our younger generation to learn about your rich heritage. Apart from using the panchangam for determining the auspicious time to start an event, it gives them an understanding of astronomy, how the planets move, retrogression of planets, the concept of the *Lagna* – Ascendant (The rising sign on the eastern horizon on the ecliptic), apparent movement of the Sun reaches its highest or lowest excursion relative to the celestial equator on the celestial sphere (Uttarayana and Dakshinayana -- Solstice), the combustion of planets (Asth), and how the seasons change because of the earth's tilt (Solstice and Equinox).

Panchangam helps the younger generation to appreciate the deep knowledge and science that is embedded in our ancient culture and heritage and how our daily life was totally based on astronomy, which the younger generation is not aware of. This panchangam publication in English is not about the language preference, but an effort to make the panchangam more understandable and hence more reachable to our younger generation and general public.

Everyone wants to live happy life. Happiness is a relative state of mind as a result of various baselines established by us in our mind. This is where selection of auspicious time (Muhurtha) comes into picture. Younger generations is also not aware about proper selection of auspicious time. This publication will help to understand the importance of auspicious time (Muhurtha), to know when to observe which festival and understand the scientific aspect of Hindu panchangam.

I am indebted to all of my gurus. First my grandfather Pundit Maganlal Devshankar Shastri, then Pundit Tulajashankar Dhirajram Shastri, Pundit Amritlal Trikamji Acharya, Pundit Chhelshankar, Pundit Narmadashankar Shukla have merged into infinite – The great consciousness. Rigveda says *'ekam satya vipra bahudha vadanti'*. The truth is one and it fills all quarters – above, below, left, right and around – The great consciousness that animates our biological bodies. Although they have merged with infinite, they are still with me as my biological body is animated by the same great consciousness and guiding me from time to time. My uncle Pundit Narayandas Revashankar Upadhyay continues to guide me even today. There are many gurus I met on my way I'm indebted to all of them. I am indebted to my parents their blessings helped me learn complex panchanga siddhanta even today.

## Muhurtha

### ***Janana Shanti (Shanti for Child Birth during inauspicious Time)***

Find out Child's birth nakshatra, Tithi and Yoga. These can be found from the panchanga. Following requires shanti:

- Krishna Paksha's 14 (Chaturdashi), 30 (Amavasya) tithi.
- Nakshatra: Ashlesha, Jyestha, Mula. Anytime born during these Nakshatras
- Nakshatra Charan: Divide the entire duration of the nakshatra and divide by 4. Each part gives nakshatra charana. Now determine if the birth was in following charana (or Padam) then it requires Shanti.

The remainder time you can subtract from end time of Revati nakshatra mentioned in the panchangam if the birth time falls during that time it requires shanti).
  - Ashwini Nakshatra's first 2 ghatika (calculate same way as above).
- Yoga: Vaidriti and Vyatipata
- Karana: Bhadra or Visthi Karana
- Born during Visha Ghatika (Varjyam mentioned in this panchangam).

### Basic Muhurtha Tips

#### Panchaka Rahita Vidhi for Muhurtha

Important ceremonies such as marriage, nuptials, entry into new houses, etc., this should be carefully looked into. There are several methods by which panchaka are determined. The most common method is to add following and divide by the number 9.

- The number of the lunar day (from the 1st of the month). For Krishna paksha add 15 to the tithi. For example, Krishna paksha prathama to be 16, and amavasya to be 30. You can find the tithi in our panchangam. The time after tithi is the time when the tithi ends.
- The number of the weekday, Sunday 1, Monday 2, Tuesday 3. etc.). You can find the day in our panchangam. It's the top most header of the column. For the night time Muhurtha please don't change the day. Indian day is from one sunrise to another sunrise.
- The number of the constellation (from Aswini 1, Bharani 2, etc..). You can find the Nakshatra in our panchangam. The time after the Nakshatra is the time when the Nakshatra ends.
- The number of the Lagna (from Aries/Mesha 1, Taurus/Vrishabha 2, etc..). You can find the lagna from our lagna table for your city. This can be found by logging into [www.mypanchang.com](http://www.mypanchang.com) or [www.mypanchang.com/astrology](http://www.mypanchang.com/astrology) and click on vedic kundli, and enter details.
- Now add these together and divide the total by 9. If the remainder is 1, 2, 4, 6, or 8 then it indicate bad results as follows:
  - 1 (mrityu panchakam), it indicates danger.
  - 2 (Agni panchakam), risk from fire.
  - 4 (raja panchakam), bad results.
  - 6 (chora panchakam), evil happenings.
  - 8 (roga panchakam), disease.

If the remainder is 3, 5, 7 or zero then it is good. **Example:** Let's consider Tithi: Krishna Paksha Dwitiya (15+2=17), Saturday (7), Moola/Mula Nakshatra (19), and Kumbha (11) lagna. Let's add these together. This gives us total of 54. Now divide this total of 54 by 9 giving us the reminder of zero hence it is good. For Gruha Pravesham 4th and 8th house should be empty

#### For Wedding:

- ✓ All days (Vaara) are good for wedding.
- ✓ Check the thithi. Please avoid Rikta 4-9-14, Krishna Trayodashi, Amavasya, Shukla Paksha prathama 1 tithi. Rest of thithis is good for weddings. Avoid Kshya and Vriddhi thithi

#### For Gruha Pravesham,

- ✓ For Gruha Pravesha we have to also see the Kumbha Chakra.
- ✓ Kumbha Chakra in – South, West, Throat, Bottom are good
- ✓ Kumbha Chakra in – East, North, Mouth, Womb are bad.

#### Wedding & Gruha Pravesham Muhurtha see the following also:

- ✓ Guru / Shukra are good planets and they can occupy those houses. No other can
- ✓ Avoid sun and or mars in 7th rashi from the bride's rashi.
- ✓ When guru is in Kendra or trikona it removes 10000 doshas and Shukra removes hundreds of doshas.

## TORONTO ON PANCHANGAM YEAR 2021 BASED ON TORONTO ON CANADA TIME

- ✓ Check for Tara balam. **Tara balam:** To find a day is suitable for your Muhurtha Tara balam is required. Count from your birth Nakshatra to Nakshatra of the Muhurtha day you are seeking. Please avoid 1-3-5-7-10-12-14-16-19-21-23-25 Nakshatra counting from your birth Nakshatra. For example: If your birth Nakshatra is Swati, and today's Nakshatra is Aswini, now counting from Swati to Aswini it gives us the count of 14th Which is not a good tara balam. Hence till Aswini Nakshatra prevails that time is bad.
- ✓ Check for Chandra balam. **Chandra Balam** is important in weddings, and other rituals. Tara balam is more subtle. Counting from your moon rashi (Hindu rashi) to the day's Chandra rashi if the count is 1, 3, 6, 7, 10, 11 then day will be good for you. Shukla Paksha 2, 5, 9 are good and in Krishna Paksha 4, 8, 12 are good.
- ✓ Check for panchaka balam.

To find out your rashi and nakshatra visit [mypanchang.com/astrology](http://mypanchang.com/astrology) and then click on the Vedic kundli, fillout your details and click submit) to the current's time Chandra (mentioned in this panchanga), look them into this table and get the number. When the numbers are 1, 3, 6, 7, 10 and 11 then its good otherwise its bad. In Shukla paksha 2, 5, and 9<sup>th</sup> positions are good and in the Krishna Paksha 4, 8, and 12 positions are good. When Chandra bala is bad the parihar is Chandra graha pooja, mantra japa, and donation of rise. Shukla paksha give importance to Chandra balam and in the Krishna Paksha give importance to Tara balam.

**Guru Balam**

For Vivaha (Marriage) and Upanayana (Janeu) muhurtha, Guru balam is given importance. In marriages Kanya's guru balam needs to be seen. Count from her Janma rashi (Rashi of the birth moon) to the date and time when the ceremony is to be done that time's rashi of the guru. If the count is 2, 6, 7, 9 or 11 then it is auspicious. If the count is 1, 3, 6, or 10 then Guru puja, shanti, guru mantra japa needs to be done before marriage. If the count is 4, 8, and 12 then its bad. One needs to perform 3 times puja, shanti or mantra japa for such positions.

Notes: Numbers under each months are tithis. 1 indicates Prathama and 12 indicates dvadashi. For Trayodashi (13), Chaturdashi (14) and Purnima (15) please use 3, 4<sup>th</sup> and 5<sup>th</sup> respectively. Travels are not advised on Amavasya (30) hence not mentioned here. Next Columns are Prahara. Each day and nights are divided into 4 equal parts. The Day is treated as from one sunrise to sunset. Hence for Day travel Subtract Sunset from Sunrise time, giving you dinamana. Divide this dinamana by 4 giving you duration of each Prahara. Calculate this prahara from Sunrise by adding the duration of prahara we just calculated. For night time, calculate ratrimana by subtracting sunset from the next day sunrise and then divide by 4 giving duration of each prahara during the night time. Add this to sunset and go on calculating prahara for night. Then comes direction in which you are travelling.

**Night time Prahara Calculation Example:**

- For example next day sunrise is 6:24 (decimal 30.4) and previous day sunset is 17:50 (Decimal 17.8333333333).
- Convert time into Decimals for easy calculations. To get time in decimal divide minutes by 60 and add this to hours. For next day sunrise add 24 hours to the hours.
- Subtract nextday sunrise from sunset. This means ratrimana is 12.5666666666667.

## TORONTO ON PANCHANGAM YEAR 2021 BASED ON TORONTO ON CANADA TIME

- Divide this by 4, giving us duration of each prahara as 3.14166666666667 which means 3 hours 8 minutes and 50 seconds for each prahara.
- Add this to the previous day sunset. Now we want to travel at 9 PM. This means our prahara is going to be 2<sup>nd</sup> Prahara.
- For example if you would be travelling on Pushya Ekadashi (11) in the 2<sup>nd</sup> prahara to India (which is East from Seattle), which brings Financial Gain (2<sup>nd</sup> Prahara Result) and Death (East), which means both results can be experienced. Death means near death experience here. Need to be careful about accidents, swimming etc. Where there is a '-' means zero result.

The day time prahara calculation is very simple. This table does not require use of other doshas like Chandra dosha, Disha shola, Yogini, Ghata Vaara etc. This is told by Swami Gorakhanath to Swami Matsyendranath.

Select the date of travel and then check panchanga for the day and that day's nakshatra. Look up into this table the result is in the left hand column. After that check Tarabalam, Chandrabalam etc. Additionally for timing chaturthgatika table or Chogadia (Gowri panchanga is also seen). They are calculated from the sunrise to sunset. Please visit [www.mypanchang.com/panchang](http://www.mypanchang.com/panchang) and select your city and then click on the chogadia to get chogadia table and then select right time. Good Chogadia are Shuba, Labha, Amritha and Chala.
